SMART SECURITY & SURVEILLANCE
Smart Security Surveillance Solution is providing video surveillance through cameras.

The Smart Security Surveillance is an integral part of “Smart Cities Solutions”. End users need to implement systems that not only monitor security, but allow them to be more proactive by performing forensic analysis to understand the nature of threats before they materialize as security incidents. They are also looking for ways to use surveillance data for non-security applications like business efficiency and market intelligence, which will help generate additional ROI.

**Business Challenges**

- Response time to identified threats
- Scalability & Data Management
- Performing advanced analytics to the data
- Providing remote access

**Solution Highlights**

Smart Security Surveillance solution provides video surveillance through IP camera network, fixed as well as mobile. The live feeds are transmitted to the control and command centre for real-time monitoring. Real-time information enables security agencies to take prompt actions. Role based facility access is enabled with the Access Control Solution. The solution enables authorized access to any facility and helps prevent intrusion.

Security and Surveillance solutions are complete - including LPR (License Plate Recognition), FR (Facial Recognition) and Video analytics and Video management systems.

**Solution Implementation**

Tech Mahindra Smart Security Solutions are:

- Smart Security
  - Smart Visitor Management
  - Smart Access Control
- Smart Surveillance
  - AMPR, Face recognition
  - PM intrusion & detection
  - Behavior Analysis
  - Event Integration
Business Benefits

- Helps to respond more effectively to threats.
- Helps to lower the security overhead with smart technology.
- Helps to reduce losses and improve efficiency.

Differentiator - Tech Mahindra Edge

Tech Mahindra has vast experience in integrating physical security with IT, working with wireless and wired technologies, and designing networks. To help our clients develop solutions that meet their needs, we maintain alliances with many of the leading independent vendors of video monitoring technology. Our open and extensible architecture is designed to enable users to add or change hardware and apply new analytics technologies as the needs change.

Case Study

Smart Security Surveillance for Mahindra World City Jaipur and Smart Surveillance for Lucknow Police.
